

GOODWAY®

BRUSH BASICS: Goodway Technologies offers boiler cleaning systems that can be matched with a selection brushes and scraping tools to suit the job. It's best to discuss your deposits specifically with a Goodway sales rep to get the brushes you will need.

Goodway's high-quality brushes and scrapers include:

NYLON BRUSHES

Nylon brushes are best for light deposits.

STEEL SPRING BRUSHES AND BRASS BRUSHES

Steel spring brushes and brass brushes provide extra toughness for removing soot deposits in firetube boilers.

FTS TUBE SCRAPER TOOL

The FTS tube scraper tool can provide a little more soot-cleaning power than a brush.

THE RIGID ARM FLARE CONE

The rigid arm flare cone is perfect for the largest, heavily fouled firetubes, removing the most caked on fouling from tubes up to 6 1/2" in diameter.
