

PUREBELT® MODULAR BELT CLEANING SYSTEM

PUREBELT® MODULAR Advanced Cleaning for Mesh-Style Plastic and Metal Belts

The patented PureBelt® Modular Conveyor cleaning system offers the most advanced cleaning technology for mesh-style plastic or metal belts. This system uses high-temperature dry steam to clean belts effectively and safely, conserving 90% more water than other cleaning methods. Using the innovative spinning steam head, conveyor belts are quickly cleaned of soils, sugars, fats, and allergens, leaving belts ready for immediate production. You can use the system across multiple belts in your facility, and it can be sized to fit your exact conveyor dimensions.

The PureBelt® modular cleaning system features an intuitive and easy-to-use software interface that lets you customize cleaning patterns and techniques based on the belts in your production facility. Additionally, special sensors automatically determine belt motion, optimizing cleaning performance based on conveyor belt speed. Lastly, this system has been proven to eliminate yeast and mold from product contact surfaces, and is fully "dry cleaning".

FEATURES

- Powerful, easy-to-use software for optimal cleaning control
