

THE NEXT GENERATION OF DRY CLEANING

DIB-2500 Dry Ice Blaster

The DIB-2500 harnesses the revolutionary cleaning power of dry ice to deliver enhanced cleaning of equipment surfaces. When other cleaning methods cannot get the job done, dry ice blasting is our most aggressive cleaning option.

It is completely waterless, non-abrasive, non-toxic, and non-corrosive making it ideal for food and beverage production facilities where difficult soil buildup must be removed. Quickly and easily removes heavy grease, caked-on soils, polymerized oil, baked-on carbon, and more, reducing labor costs and production downtime as you can even clean equipment while in operation.

DIB-2500: Stainless-steel dry ice blaster, 23' ft technical rubber hose, aluminum blast nozzle, 3 6 mm nozzle inserts, 3 8 mm nozzle inserts, and 3 10 mm nozzle inserts.....**Call for Price**

DIB-2500	
Hose Length	23'
Hose Diameter	3/4"
Air Consumption	From 70 CFM Minimum to 530 CFM
Dry Ice Consumption	55 to 200 lbs/hr (adjustable)
Power	110V
Pressure	30 to 174 PSI (adjustable)
Hopper Capacity	51 lbs
Dimensions	30.5" L x 18" W x 37" H
Weight	178 lbs

WHAT IS DRY ICE?

Dry ice is the solid form of CO₂ with an extremely cold temperature of -110°F (-79°C). Made by taking liquid CO₂ and expanding it to produce a snowlike substance and then compressed to make hard dry ice pellets.

HOW DOES IT WORK?

Propelled by compressed air, the DIB2500 fires dry ice pellets at supersonic speeds triggering a micro-thermal shock upon impact, effectively breaking the bond between soils and surfaces. The pellets turn from a solid into a gas form on contact, a process called sublimation, leaving the surface clean and dry.

BENEFITS

- Ideal for dry clean only environments
- More thorough deep cleaning
- Reduce production down time
- Sanitary stainless-steel design
- Compact size
- Large hopper

APPLICATIONS

- Carbon build up
- Periodic deep cleaning
- Ovens
- Fryers
- Slicers
- Areas where even trace amounts of water cannot be tolerated
- Chains
